**NEAPCO DESIGNS AND MANUFACTURES QUALITY PRODUCTS THAT ARE BEST SUITED FOR YOUR APPLICATIONS**

**N** eapco's products for the Farm Machinery market focus on self-propelled machines, implements, attachments and farmstead equipment that handle or process agricultural commodities or materials. Farm Machinery-Metric components utilize the Benzi & Di Terlizzi B01 to B10 universal joints. Neapco also offers a complete line of greaseable universal joints and permanently lubricated universal joints in specific series. Common equipment types are:

- Self Propelled Equipment
- Implements
- Farmstead Equipment and Attachments

Please see the Farm Machinery section for specific types of equipment.

Neapco offers many styles of yokes to interface with different output shaft configurations. Standard products include clamp, quick disconnect, round bore, spline and flanged yokes. Where driveshaft speeds are 1000 rpm or less, Neapco can provide patented

driveshaft shielding designed to meet safety requirements and applicable standards.

Neapco can provide fixed-length or telescoping drives using: Profile Tubing, Lemon, Triangular, Star, Splined Shafts, Round Tube.

The CV joints offer a continuous operation at 25 degrees and up to 80 degrees for short durations. The Benzi & DiTerlizzi shielding system allows coverage at any angle for maximum protection.

Various types of torque limiting devices are available as an integral part of the driveline solution. Types of clutches include:

- Radial Pin
- Shear Bolt
- Friction Disc
- Overrunning
