Brute Force with AlumiGuard™

Corrosion-Resistant High-Performance
Universal Joints for Aluminum Driveshaft
Yoke Applications

Neapco Brute Force premium universal joints with Alumiguard feature corrosion-resistant bearing cups. The bearing cups and snap rings are coated with an OEM-specified process. This chemical coating has electrical insulating properties which prevent the corrosion (Galvanic reaction) that occurs between two dissimilar metals (as in a steel bearing cup and an aluminum driveshaft yoke). Over time this will cause pitting in the aluminum yoke bores, especially when operated in areas that are subject to moisture and corrosive elements such as salt. General Motors and Nissan vehicles use this coating in aluminum driveshaft applications.

Application Usage by Part Numbers

1-0626BF 1310 Series kit used on various 2WD & 4WD GM, Ford, and Dodge vehicles.

1-0718BF Cleveland 1310 Series kit used on various 2WD & 4WD Ford vehicles.

1-0719BF Cleveland 1310 Series kit used on various 2WD Ford pinion yoke applications.

2-0599BF Conversion kit (7260 to 1330 Series) used on various Dodge vehicles.

2-0617BF 1350 Series kit used on various 2WD & 4WD GM, Ford, Dodge, and Nissan vehicles.

2-0621BF Conversion kit (Saginaw S44 to 1330 Series) used on various 2WD & 4WD GM vehicles.

2-0631BF 1330 Series kit used on various 2WD & 4WD Ford, Dodge, and GM vehicles.

2-0633BF 1330 Ford Cleveland Series kit with (2) 1.063" cups and (2) 1.125" cups.

2-0637BF Conversion kit (7290 to 1330 Series) used on various 2WD & 4WD Dodge vehicles.

2-0641BF 1410 Series kit used on various 2WD & 4WD GM, Ford, and Dodge vehicles.

2-0647BF Conversion kit (7260 to 1310 Series) used on various 4WD Dodge vehicles.

2-0737BF Saginaw S44 Series (3R Series) used on various GM vehicles.

3-0544BF Conversion kit (Saginaw S44 to 1310 Series) used on various GM vehicles.

**Premium Universal Joints with Alumiguard are recommended for aluminum driveshaft yoke applications.
